

Vishal Gautam Senior Technical Lead • Backend Engineering • UPI Payments

Phone: +91-9454957337 | Email: vishalgautam2706@gmail.com | LinkedIn: <https://www.linkedin.com/in/vishal-gautam-71a-bb014> Location: Noida, India

SUMMARY - Senior Technical Lead (UPI) managing a 4-engineer team; ~6+ years building and operating high-scale payments platforms. - Led multi-PSP architecture and migration (~50M users) with high availability and zero customer disruption. - Proven record of reducing latency and cost at scale: 50-60% API latency drop at ~5,500 TPS; hot-tier storage cut from 2,000 TB to 100 TB (~\$170K → ~\$9K per month). - Deep experience with Java, Spring Boot, Kafka, Aerospike, MySQL, caching, resiliency patterns, and production observability.

CORE SKILLS - Languages: Java, C, C++ - Backend: Spring Boot, REST APIs, Microservices, Asynchronous Messaging (Kafka) - Data/Storage: Aerospike, MySQL, Elasticsearch - Reliability: Bulkhead & Circuit Breaker patterns, Autoscaling, DR/BCP drills - Observability: Grafana, Prometheus, Kibana, Elastic Stack - Concepts: Distributed Systems, Caching Strategies, Data Structures & Algorithms, OOP, DBMS

EXPERIENCE One97 Communications Ltd. (Paytm) — Senior Technical Lead (UPI) Noida, India • 2019 – Present - Lead a 4-engineer team; plan sprints, conduct code reviews, mentor engineers, and drive on-schedule delivery across UPI services. - Designed and led rollout of a multi-PSP model for the Paytm app, migrating ~50M users from the legacy bank system to the new architecture with no customer-impacting downtime. - Implemented an Aerospike-backed UPI user-profile cache, reducing API latencies by 50-60% while sustaining ~5,500 TPS. - Drove a cost-optimization charter for UPI: - Reduced hot-tier data from 2,000 TB to 100 TB, cutting monthly spend from ~\$170K to ~\$9K. - Lowered log retention footprint from 100 TB (3 days) to 30 TB (3 days) with smarter indexing and retention policies. - Enabled autoscaling across services to match diurnal load patterns and reduce idle capacity. - Brought per-transaction unit cost from 0.7 paisa/txn to 0.6 paisa/txn; platform remains scalable to 2x traffic. - Orchestrated DR drills across all UPI components, validating recovery objectives and failure playbooks end-to-end. - Standardized resiliency patterns (Bulkhead, Circuit Breaker) across microservices to harden failure isolation and graceful degradation. - Built a dedicated microservice to route customer-care-related UPI queries to the Back Office panel, improving resolution throughput. - Delivered UPI Wallet Interoperability: enabled users to link wallets to UPI addresses and built an onboarding pipeline for wallet users.

EDUCATION National Institute of Technology (NIT) Jalandhar — B.Tech, Computer Science & Engineering 2015 – 2019 • CGPA: 7.23

S.V.M Inter College, Unnao, Uttar Pradesh — XII-PCM Score: 90.2%
